Cable Management and Protection
MULTIDUCT™ IS A MULTIPLE DUCT CABLE PROTECTION SYSTEM made of lightweight parts that are suitable for a single person lift. Components assemble quickly and easily with our unique push-fit connection providing maximum savings on project time and cost. Durable construction and high crush strength require shallower burial depths and no concrete or special backfill reducing excavation requirements and enabling excavated materials to be reused during re-installation. A wide range of accessories offer solutions for obstacles such as tight turns, elevations, adjustable height on-site, and natural curvatures.

Engineered for simplicity so you can get in and get the job done.
MULTIDUCT™

STRONG & DURABLE
High strength and crush resistant, requiring no concrete or special backfill and are buried in shallow depths.

LIGHTWEIGHT
Each section weighs under 40 lbs (2) and is suitable for single person lift.

FLEXIBILITY
2 degree of flexibility within its connection results in natural bends that can follow the curve of a track or roadway.

QUICK ASSEMBLY
The unique ‘push fit system’ makes installation quick and easy and, eliminates connection disengagement when pulling cable.
