

# ONELIFT™ Pump Station

## Safer

Less open excavation time enhances safety.

## Efficient

The optimized wet well configuration reduces solids accumulation.

## Stable

Eliminates differential settlement issues often seen in two 2-structure pump stations.

## Faster

The single tier excavation allows a simpler and faster installation, which reduces dewatering costs, while the larger wet well volume can reduce the excavation depth.

## Minimal

Smaller footprint with single-structure.

## WHY ONELIFT™

OneLift's integral valve vault is a single structure and an optimized shape, reducing conventional pump station footprints up to 50%.

# PRODUCT BENEFITS

**OneLift provides a complete, pre-assembled, pump station when it arrives on site.**

**Quality:**

Piping, valving, and all interior equipment are pre-installed in a controlled factory environment.

**Faster:**

Standard design and pre-assembly means faster product delivery and less install time on site.

**Safer:**

Less time in the excavation.

**Accountable:**

Turnkey package from one supplier with a strong product warranty.

**OneLift uses standard, in-stock, structural components.**

**Efficient:**

Submittal packages are created quickly and shorten the project cycle.

**Assured:**

The structural design is standardized and sealed by a licensed professional engineer.

**Ease:**

The unique shape ensures fail-proof alignment of the station's sections and piping.
